

WelTec Mathematics Series

Multiplication

All trades based jobs will require you to use multiplication to a certain extent. Additionally, you will probably need to be able to add, subtract and divide fairly accurately to make sure you're able to do what work you need to do as well.

In order to be able to multiply well, you'll need to understand the place value of the digits that make up a number. This has been covered in another handout.

Multiplication

The result of multiplying numbers is called the **product**. The **multiplication sign** (\times) tells you have to multiply. Multiplication is a short method for adding equal amounts. For example, 4 times 5 (4×5) means 4 fives or $5 + 5 + 5 + 5$.

Numbers can be multiplied in any order. The same product is obtained regardless of whatever order the numbers are multiplied. For example, $4 \times 3 = 3 \times 4$. This is called the **commutative** property of multiplication.

Example 1

Multiply 386×7 .

Solution

In expanded form the addition would look like this:

Expanded Form	Shorter Form
3 hundreds + 8 tens + 6 ones	386
\times 7	\times 7
21 hundreds + 56 tens + 42 ones	42
2100 + 560 + 42	560
2702	2100
	2702

Short Multiplication

Short multiplication is used to work out the product of two numbers when the multiplier only has one digit in it. For example a problem such as 7×386 is one where short multiplication is used.

Example 2 – Process for Short Multiplication

Multiply 7×386 .

Estimate the answer

$$7 \times 400 = 2800$$

Work out the answer

1. Write the multiplier under the unit digit of the number
Multiply the 7 by the unit digit i.e. 6.

$$7 \times 6 = 42$$

Write 2 in the unit position of the answer

2. Multiply the 7 by the tens digit of the number

$$7 \times 8 = 56$$

Add the 4 tens from the product of the units

$$56 + 4 = 60$$

Write the 0 in the tens position of the answer

3. Multiply the 7 by the hundreds of the number

$$7 \times 3 = 21$$

Add the 6 hundreds from the product of the tens

$$21 + 6 = 27$$

Write 7 in the hundreds position

Write 2 in the thousands position

4. Check the answer to the estimate

2702 is about the same as 2800

$\begin{array}{r} 386 \times \\ \quad 7 \\ \hline 2702 \\ \hline 64 \end{array}$
--

Question 1

Estimate each of the following products to the indicated place value.

- a) 75×8 (nearest ten)
- b) 775×5 (nearest ten)
- c) 1877×9 (nearest 100)
- d) $54,157 \times 8$ (nearest 1000)
- e) 1804×3 (nearest hundred)
- f) $12,199 \times 5$ (nearest thousand)
- g) $456,900 \times 4$ (nearest thousand)
- h) $318,234 \times 8$ (nearest thousand)
- i) $2,132,512 \times 9$ (nearest ten thousand)

Answers	
a)	$80 \times 8 = 640$
b)	$780 \times 5 = 3900$
c)	$1900 \times 9 = 17,100$
d)	$54,000 \times 8 = 432,000$
e)	$1800 \times 3 = 5,400$
f)	$12,000 \times 5 = 60,000$
g)	$457,000 \times 4 = 1,828,000$
h)	$318,000 \times 8 = 2,544,000$
i)	$2,130,000 \times 9 = 19,170,000$

Long Multiplication

Short multiplication is used to work out the product of two numbers when the multiplier has two or more digits in it. For example a problem such as 436×7812 is one where long multiplication is used.

Example 3 – Process for Long Multiplication

Multiply 436×7812 .

Estimate the answer

Round 436 to 400 and 7812 to 8000

$$400 \times 8000 = 3,200,00$$

Work out the answer

1. Write the multiplier under the number, putting the digits in their correct position
Multiply the number by the units of the multiplier, using the procedure for short multiplication. This gives the first answer.

$$6 \times 7812 = 46,872$$

Write this answer starting in the units position.

2. Multiply the number by the tens digit of the multiplier to get the second answer.

$$3 \times 7812 = 23,436$$

Write this second answer under the first answer, starting in the tens position

3. Multiply the number by the hundreds of the multiplier to get the third answer.

$$4 \times 7812 = 31,248$$

Write the third answer in the hundreds position

4. Add the three answers to get the product

5. Check the answer to the estimate

$$3,406,032 \text{ is about the same as } 3,200,000$$

$$\begin{array}{r} 7812 \times \\ 436 \\ \hline 46872 \\ 23436 \\ 31248 \\ \hline 3406032 \end{array}$$

Question 2

Estimate each of the following products to the indicated place value.

- 914×67 (nearest ten)
- $12,737 \times 79$ (nearest ten)
- 7816×513 (nearest 100)
- $23,418 \times 1147$ (nearest 1000)
- $15,553 \times 999$ (nearest hundred)
- $327,800 \times 274$ (nearest thousand)
- $405,607 \times 112$ (nearest thousand)
- 419×7635 (nearest thousand)
- $423 \times 63,940$ (nearest ten thousand)

a)	$910 \times 70 = 63,700$
b)	$80 \times 12740 = 1,019,200$
c)	$7,800 \times 500 = 3,900,000$
d)	$23,000 \times 1000 = 23,000,000$
e)	$15,600 \times 1000 = 156,000,000$
f)	$12,000 \times 5 = 60,000$
g)	$457,000 \times 4 = 1,828,000$
h)	$318,000 \times 8 = 2,544,000$
i)	$2,130,000 \times 9 = 19,170,000$

Answers

Question 3

Multiply the following numbers and then compare your answers to the estimates you calculated in questions 1 and 2.

a) 75×8 b) 775×5 c) $54,157 \times 8$ d) 6×523 e) 3×1804

f) $5 \times 12,199$ g) $4 \times 456,900$ h) $8 \times 318,234$ i) $9 \times 2,132,512$

j) 57×81 k) 914×67 l) $12,737 \times 79$ m) 7816×513 n) $15,553 \times 999$

o) $23,418 \times 1147$ p) $327,800 \times 274$ q) $405,607 \times 112$ r) $419 \times 7,635$ s) $423 \times 63,940$

t) $2,561 \times 17,738$ u) $1,176 \times 62,347$ v) $4,214 \times 18,919$ w) 943×70 x) 1798×507

y) 7100×590 z) 8009×400

Multiplying Whole Numbers in Practical Applications

Example 4

The total cost of fixtures and lights for an office lighting installation is found by an electrician. The following fixtures and lights are:

- 12 incandescent fixtures at \$18 each.
- 22 indirect fluorescent lights at \$37 each
- 33 direct fluorescent lights at \$28 each.

Find the total cost.

Solution

Work out the process

Multiply the required number of each light or fixture by the cost of each. The total cost is the sum of the products.

Estimate the answer

$$\begin{aligned}\text{Total cost} &= (10 \times \$20) + (20 \times \$40) + (30 \times \$30) \\ &= \$200 + \$800 + \$900 \\ &= \$1900\end{aligned}$$

Work out the answer

$$\begin{aligned}\text{Total cost} &= (12 \times \$18) + (22 \times \$37) + (33 \times \$28) \\ &= \$216 + \$814 + \$924 \\ &= \$1954\end{aligned}$$

Check the answer to the estimate

\$1954 is about the same as \$1900.

Question 4

An offset press feeds at a rate of 2,050 impressions per hour. How many impressions can a press operator print in 14 hours?

Answers

$$\begin{array}{r} 2,050 \times 14 \\ \hline 8200 \\ + 2050 \\ \hline 28700 \end{array}$$

So, there are 28700 impressions in 14 hours.

Question 5

An engineer works out the total weight of I beams required for a building. The table below lists the data used in finding the weight. Find the total weight of the I beams for the building.

	75mm x 40mm Weight: 36kg/m	100mm x 50mm Weight: 25kg/m	150mm x 75mm Weight: 15kg/m
Number of 3m lengths	15	0	24
Number of 5m lengths	12	18	7
Number of 6m lengths	8	32	25
Number of 9m lengths	17	8	0

Answers

$$\begin{aligned} \text{Total length of 75mm x 40mm beams} &= (3\text{m} \times 15) + (5\text{m} \times 12) + (6\text{m} \times 8) + (9\text{m} \times 17) \\ &= 45\text{m} + 60\text{m} + 48\text{m} + 153\text{m} \\ &= 306\text{m} \end{aligned}$$

$$\begin{aligned} \text{Total weight of the 75mm x 40mm beams} &= 306\text{m} \times 36\text{kg/m} \\ &= 11,016\text{ kg} \end{aligned}$$

$$\begin{aligned} \text{Total length of 100mm x 50mm beams} &= (3\text{m} \times 0) + (5\text{m} \times 18) + (6\text{m} \times 32) + (9\text{m} \times 8) \\ &= 0\text{m} + 90\text{m} + 192\text{m} + 72\text{m} \\ &= 354\text{m} \end{aligned}$$

$$\begin{aligned} \text{Total weight of the 100mm x 50mm beams} &= 354\text{m} \times 25\text{kg/m} \\ &= 8,850\text{ kg} \end{aligned}$$

$$\begin{aligned} \text{Total length of 150mm x 75mm beams} &= (3\text{m} \times 24) + (5\text{m} \times 7) + (6\text{m} \times 25) + (9\text{m} \times 0) \\ &= 72\text{m} + 35\text{m} + 150\text{m} + 0\text{m} \\ &= 257\text{m} \end{aligned}$$

$$\begin{aligned} \text{Total weight of the 150mm x 75 mm beams} &= 257\text{m} \times 15\text{kg/m} \\ &= 3,855\text{ kg} \end{aligned}$$

$$\begin{aligned} \text{Total weight of the I beams} &= 11,016\text{ kg} + 8,850\text{ kg} + 3,855\text{ kg} \\ &= 23,721\text{ kg} \end{aligned}$$
